

ULTRASHADE PAINT SYSTEM (UsPs)

What is the UsPs (Ultrashade Paint System)

UsPs is the type of high strength paint with equivalent strength to PVDF and that ALBOND has a tailor made and durable solution that suit the most challenging architectural projects.

UsPs is a very high durability topcoat, designed for cladding and roofing. It offers an excellent stability in appearance and shade in outdoor exposures, and a good flexibility.

UsPS, PFA-free paint not subject to restrictions

Expected growing sustainability constraints around fluorinated chemistry (restriction proposal from ECHA on both the use and production of PFAs substances + PFAs law Maine (ME) ban the use beginning January 1, 2030.)

Why is the UsPs?

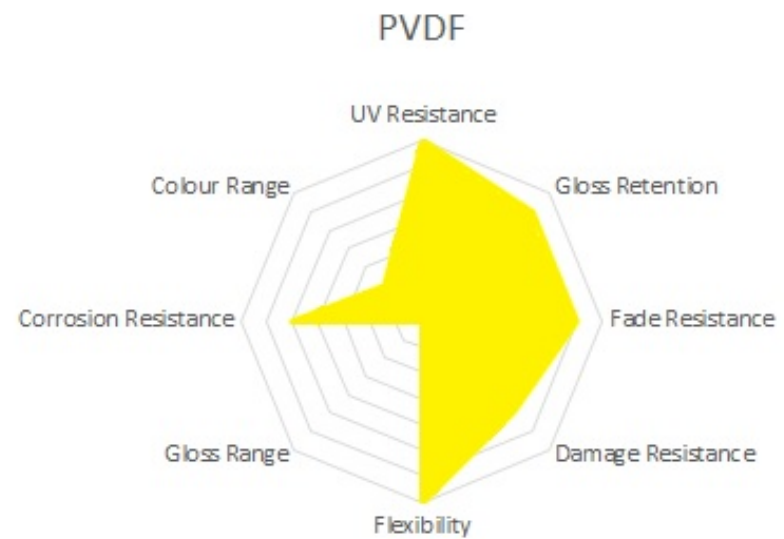

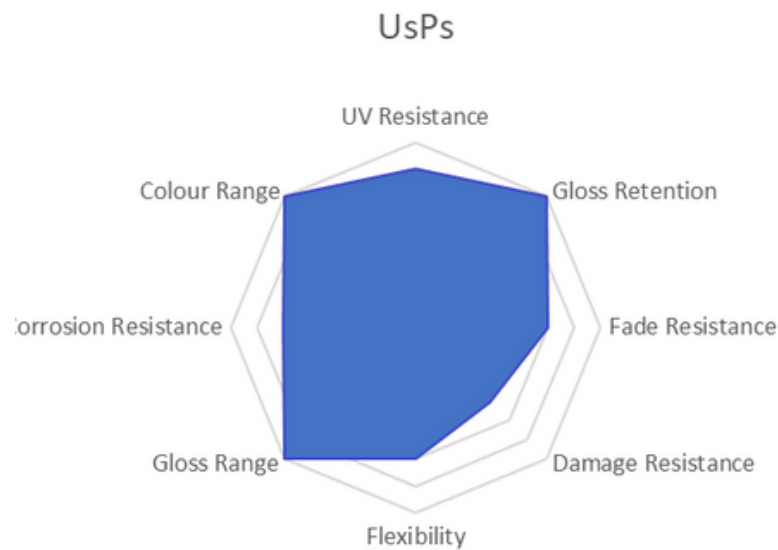

- Highly durable
- Excellent corrosion resistance with 10μ primer + 20μ topcoat application.
- 20 year warranty given for a 3-coat system
- High variety:
 - Colours (bright colours, metallics, copper, etc.)
 - Gloss (wide gloss range from 5 to 90)
 - Design (aspects, textured, wrinkle, etc.)

Why is the UsPs?

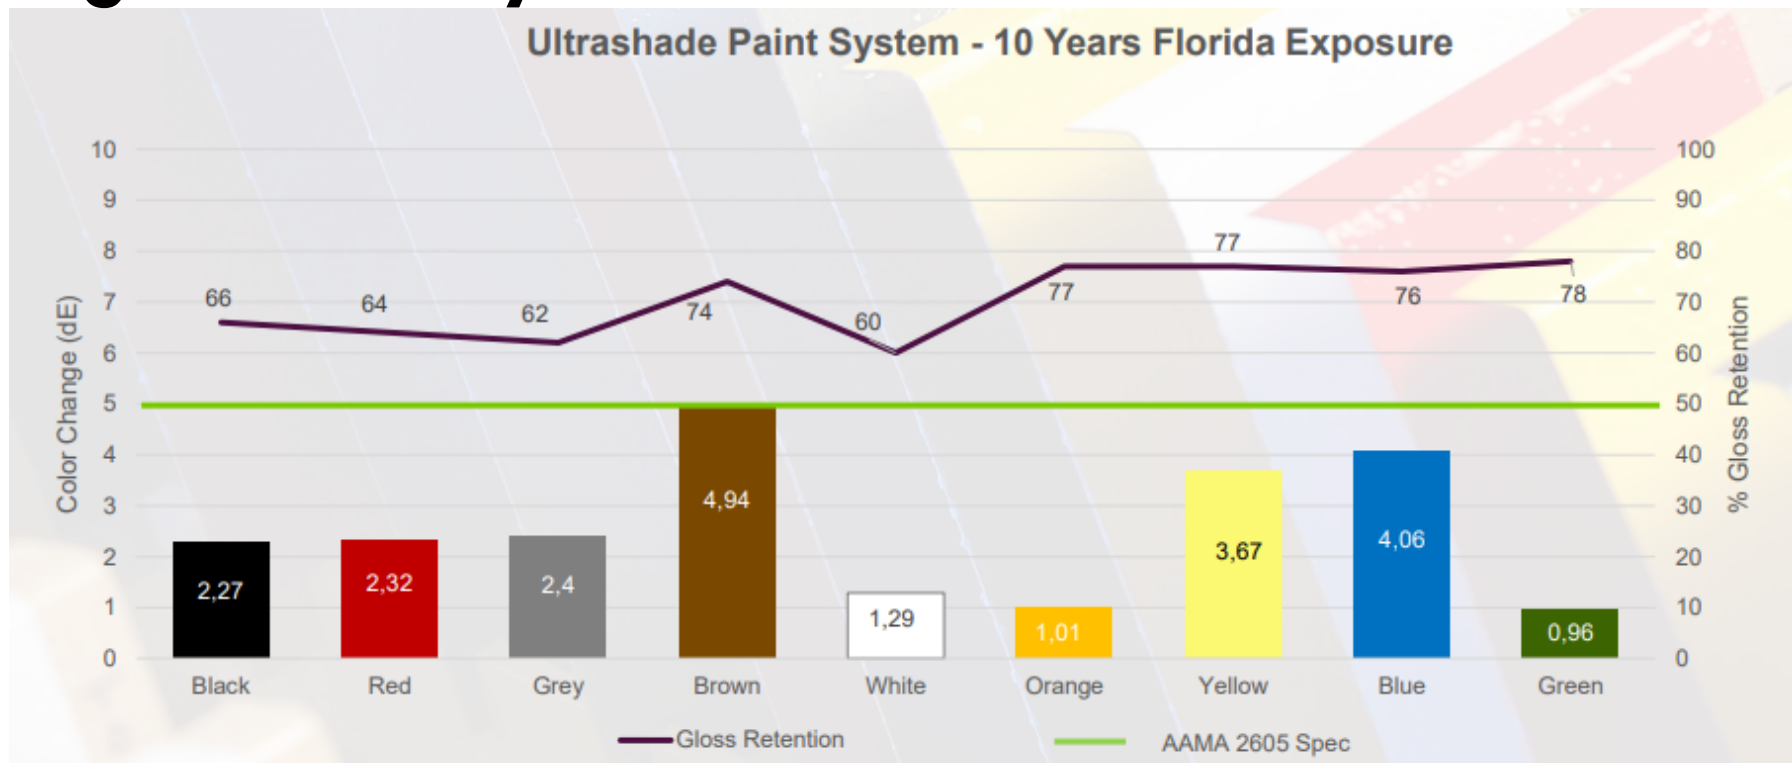

It is an optimum solution 👍

Why is the UsPs?

High Durability

SUSTAINABILITY

Significant GWP improvement with UsPs

UsPs has been found to reduce Global warming potential or Carbon footprint (GWP/CF) by 61% when tested under the same conditions with fluorocarbon based paint.
